

# GENERATIONAL OPPORTUNITY

## Massive Inventory of Fruit Trees on Clearance - First Look : Food Security

Hello Everyone, your attention to this matter can resonate for generations.

Canada's largest fruit tree producer in Harrow Ontario has been sold and all trees must go. Apples, Pears, Peaches and Cherries various sizes and species specific to Turtle Island growing conditions. A once in a Seven Generation moment for Indigenous Food Security...

"Supply Change" is established through a collective community, with end-to-end Indigenous Supply Chains #knowyourfarmer. This can facilitate Nationwide collaboration.

I feel we owe it to future generations to act on this as we have a "First Look" at this Inventory. I'm reaching today as I visited fruit trees in Harrow this past weekend.

We created the "Garden of We Do" as a brand for the collective, "working" with indigenous communities globally; including the Lenni Lenape, Busoga Kingdom (Vanilla Estate on Lake Victoria), Yorubaland West Africa, Babongo Peoples of Gabon, the Bribri Peoples of Costa Rica, amongst others. With registered entities and blessings of the territorial chiefs and local governments in which we operate, we are transforming idle lands into sustainable agrarian systems, leveraging modern telecommunications and technologies.

In 2023 we purchased a couple hundred apples from the Harrow farm (Upper Canada Growers) in partnership with the Lenni Lenape, Delaware Nation, Rez 47, and created a community garden. Since that time, we've continued to spend quality time with and developed a brotherhood/sisterhood with Elder Steven Logan, his family and beyond.

Elder Steve has 7Acres, seasonal cash crop land immediately available, with Road, Electricity and Water access to establish a Research and Development center. With a systematic approach we can transform the lands and document how to take care of the various fruit tree species in all facets. As a result of what We Do, we have world class experts that support us and will help in the growing and maintenance process. Established relationships with local commercial fruit tree growers in Southern Ontario as a real-time resource.

**We seek an audience to engage in high level conversation as time is of the essence.**

We've spent years with Elder Steve, have a reverence and understanding of how First Nations operate. This can create a commonality across Nations, coast-to-coast.

I'm based in Tecumseh (Windsor), 30km from Harrow and 120km from the Rez. Southern Ontario and BC are ideal locations for these Trees. I'm currently managing the Vanilla Estate transformation, Lake Victoria Uganda, but live over here and do over here. There are repeatable models and best practices, having the ability to document and transform lands essentially in real time was not possible until now. Keyline design, permaculture, drip irrigation, water and community is key. If not now, then when?

I'm immediately available to connect with whomever, ideally a group Zoom, as having direct access to significant inventory on clearance, with established grower expertise and pre-existing indigenous relations is unprecedented.

This opportunity uniquely positions the First Nations of Turtle Island to show Leadership and Cooperation, an inspiration for indigenous communities globally.

**Sales and Available Inventory is on a First Come First Serve Basis.**

**Minimum Orders of 1,000 Trees of the Same Species.**

**Price @ 50-60%++ Discounts for Large Combined Orders of Apples, Pears, Cherries.**

The trees become available for pickup/shipment once frost breaks, mid-late in March 2026.

With Google Earth and AI, we can advise on the appropriate species and growing conditions required. Water and Composting / Natural or Soil Nutrients are foundational.

Kindly share across interested Peoples / Bands / Organizations and Entities etc. Look forward to connecting with you at your earliest convenience.

Aujourd'hui,

Matt Guignard
